

Abraham Seidmann

Course: Information Systems for Management

*Xerox Professor of Computers and Information Systems and Operations Management; Area Coordinator, Computers and Information Systems, Electronic Commerce, Management Science and Operations Management, University of Rochester, USA
Ph.D., Industrial Engineering, Texas Tech University (Cum Laude)*

Abraham Seidmann has been actively consulting to many leading industrial and service corporations and has presented numerous research and executive seminars on five continents. He is a national expert in medical informatics and business entrepreneurship. His research and consulting activities and interests include information economics, strategic applications of health care management systems, business process design, electronic commerce, information-intensive service systems, and stochastic processes. He has won several teaching awards from the regular and executive MBA classes, including the 'Best Teaching Award,' from the MBA Class of 2010.

Seidmann is the author of more than 100 articles that have appeared in leading scientific journals, and has been the department editor for interdisciplinary management research and applications for Management Science for ten years. He is also an associate or area editor for several other leading research journals. His research was cited twice on the front page of the Wall Street Journal, and he was granted several prestigious prizes at international conferences for publishing outstanding research papers. He also won the best-paper award at the 1998 Hawaii International Conference on Systems Sciences, in Kohala, Hawaii. In 1999, the Workshop on Information Systems and Economics gave him a special award for writing "The Best Paper on Information Systems and Economics."
